StackOverflow

Full stack software engineer with 10 years of experience, having designed and delivered 20+ web and mobile applications across diverse stacks, leveraging AI tools to accelerate development, enhance productivity, and optimize workflows.

Experience

Zeuz — Dhaka, Bangladesh (Remote)
Senior Full Stack Software Engineer — Jun 2022 - Aug 2026

Texada Rental, Texada Mobile
It provides rental and operations management software for equipment rental and construction businesses. It helps companies manage rental contracts, equipment, work orders, customers, scheduling, billing, and field operations in one platform.

- Django Upgrade: Upgrading Django across multiple major versions while keeping the application stable and avoiding feature regressions. Upgraded incrementally, handled deprecated functionality, replaced outdated libraries, and added tests to ensure existing features remained unaffected.
- React Upgrade: Upgrading the frontend from React 16 to 19 while several third-party UI libraries were deprecated. Replaced deprecated dependencies and rebuilt required components where necessary while keeping the existing UI and functionality stable.
- GitHub Copilot Adoption: The team had limited experience with Copilot instructions, agents, and effective prompting across multiple projects. Created project-specific instruction files and standardized prompting to give Copilot better context and improve development efficiency.
- Application Update Detection: Users could continue using an older version of the application after a new deployment. Implemented a Webpack hash-based update detection mechanism to notify users when a new version was available and prompt them to reload.
- Local Deployment Automation: The team was spending a significant amount of time manually setting up and deploying the application for local QA and development environments. Created Ansible scripts to automate the deployment and environment setup process, reducing manual effort and making deployments more consistent.

Technologies Used: Python, Django, Django REST Framework, Flask, React, TypeScript, Redux, React Router, AG Grid, Storybook, PostgreSQL, Oracle SQL Developer, AWS EC2, Docker, Nginx, Jenkins, Travis CI, Pytest, unittest, Jest, React Testing Library, GitHub Copilot, LLMs, Generative AI, Husky, ESLint, Prettier, lint-staged.

Japan Marketing Consultancy — Bangladesh (On-Site)
Senior Software Engineer — Nov 2020 - May 2022

Contrars Survey, Contrars Mobile
It provides construction collaboration tools that allow builders to share construction information, measurements, photos, markups, and project updates in real time. The mobile application enables teams to capture and interact with construction data directly from the field.

- Cross-Device Support: Supporting low-end to high-end devices and tablets across iOS and Android. Optimized the React Native app for performance, responsiveness, and different device capabilities.
- Real-Time Communication: Providing reliable real-time peer-to-peer communication and live updates. Integrated WebRTC, WebSockets, telephony, and push notifications.
- Interactive Markups: Enabling PowerPoint-like editing of construction photos, measurements, and diagrams instead of static images. Built interactive markup and schematic editors using Konva.js.
- Performance: Maintaining smooth performance across different devices and environments. Improved React Native performance monitoring and diagnostics.

Technologies Used: React Native, Expo, React, WebRTC, WebSockets, Konva.js, Material UI, BigQuery, Vte.cx BaaS, PWA, SVG

HealthOS — Bangladesh (On-Site)
Senior Software Engineer — Mar 2020 - Oct 2020

HealthOS
It s a healthcare technology platform that connects pharmacies, healthcare providers, patients, and pharmaceutical supply chains. It provides digital solutions for pharmacy management, medicine distribution, clinical services, chronic disease management, and telemedicine.

- Mobile Application: Redesigned and developed HealthOS mobile applications using React Native and Expo, supporting a consistent experience across mobile devices.

Lead Software Engineer — Jul 2019 - Feb 2020

- Application Architecture: Led the architecture and structure of React applications and helped the team follow scalable React and state-management practices.

Junior Software Engineer — Jul 2018 - Jun 2019

- Offline-First Support: Users needed to continue working when internet connectivity was unavailable, especially in field environments. Implemented offline support using IndexedDB and Service Workers, with automatic data synchronization to the server once connectivity was restored.

Technologies Used: React, React Native, Expo, Redux, Redux Thunk, MobX, Next.js, GraphQL, Apollo Client, Python, Django, Django REST Framework, IndexedDB, Service Worker, Elasticsearch, Redis, Webpack, Sass, Jest, Enzyme, React Navigation, PostgreSQL, GitHub, Bitbucket
